AirFLEX[®]

**2017
UPGRADES**

HARVEST FASTER

NEW UPGRADES FOR A MORE EFFICIENT HARVEST

The next generation of draper header innovation, the Honey Bee AirFLEX, just got even better. Field-tested and fine-tuned, these new features and options are designed to make your harvest faster, more efficient, and more profitable.

Cross Auger

Increase combine capacity in exceptionally difficult crops. Replacing the draper shield, a hydraulic cross auger is now optional on the AirFLEX to assist in material flow from the drapers to the feed auger. The auger is adjustable to match varying crop conditions in bulky and tangled crops like peas and mustard.

25-foot Header

A header width for every farm and every crop. Honey Bee adds a 25-foot header width to the existing line-up of 30-, 36-, 40-, 45-, and 50-foot widths. The 25-foot header carries the same high-performance features of the larger widths, and speeds harvest in rigid or fully flex mode.

Skid Shoes

Shave close to the ground but high enough to avoid damage from rocks or picking up debris. Skid shoes provide the option of cutting in flex mode at 2 to 4 inches off the ground.

Vertical Sheer System

Speed harvest in downed or tangled crops. Every 2017 header table is vertical sheer-ready and can be ordered with the proprietary Honey Bee-built vertical sheer system.

Transport Plugs

Transport behind your vehicle of choice. The AirFLEX now comes with either an RV-style plug for use behind a pickup truck, or an Ag-style plug for towing behind a semi-truck or combine.

Additional Sensors

Respond to rolling terrain even faster. Two additional height sensors have been added to the 45- and 50-foot header tables as standard features, and are optional on all other header sizes.
